## How to Feed the Baby

Is often a perplexing question when mother's milk is insufficient, either in quantity or quality. Pure cow's milk is not always available, and most of the proprietary substitute foods are deficient in fat. Even cow's milk, although containing the requisite fat, is somewhat deficient in carbohydrates. But Winters says: "Children get over slight chemical differences in cow's milk much more readily than they do physical differences—those due to contamination." And Jacobi states: "Clean milk is far more important than any amount of modification."

### HIGHLAND BRAND EVAPORATED CREAM

Which is simply good cow's milk reduced two and one-half times by evaporation and sterilized, overcomes all danger of contamination. Further than that it is more readily digestible than either raw, pasteurized or boiled milk. In short, it is far preferable to ordinary cow's milk from every standpoint. It is the simplest, most uniform and satisfactory substitute food.
